

## **Manual test case**

### **TC1.1 Add tracks**

**Use case:** UC1 store tracks

**Scenario:** Check if saved in the database

**Precondition:** Access admin page select product and select a specific product.

#### **Test steps**

- User selects a product
- see the current tracks
- Adds the tracks by selecting the “+” button on the top right corner
- See the form for tracks
- Three options are presented “name”, “duration” and description
- Write “123Hej” on the name section
- Write a 5 in duration section
- Write “I don’t know what to write here lol” in the description section
- Press the “save” button

#### **Expected**

- In the firebase, the product id of the track has to be the same as the product id of the product chosen by the user.
- The name and duration field should be the same as the one the user added.
